

## 1 MHz, 85 $\mu$ A Op Amps

### Features

- Available in SC70 and SOT-23 Packages
- Gain Bandwidth Product: 1 MHz (typical)
- Rail-to-Rail Input/Output
- Supply Voltage: 1.8V to 6.0V
- Supply Current:  $I_Q = 85 \mu\text{A}/\text{Amplifier}$  (typical)
- Extended Temperature Range:  $-40^\circ\text{C}$  to  $+125^\circ\text{C}$
- Available in Single, Dual and Quad Packages

### Typical Applications

- Portable Equipment
- Photodiode Amplifier
- Analog Filters
- Notebooks and PDAs
- Battery-Powered Systems

### Design Aids

- SPICE Macro Model
- FilterLab<sup>®</sup> Software
- Microchip Advanced Part Selector (MAPS)
- Analog Demonstration and Evaluation Boards
- Application Notes

### Typical Application

### Description

The Microchip Technology Inc. MCP6L01/1R/1U/2/4 family of operational amplifiers (op amps) supports general purpose applications. The combination of rail-to-rail input and output, low quiescent current and bandwidth fit into many applications.

This family has a 1 MHz Gain Bandwidth Product (GBWP) and a low 85  $\mu\text{A}$  per amplifier quiescent current. These op amps operate on supply voltages between 1.8V and 6.0V, with rail-to-rail input and output swing. They are available in the extended temperature range.

NOTES:

## 1.0 ELECTRICAL CHARACTERISTICS

### 1.1 Absolute Maximum Ratings†

$V_{DD} - V_{SS}$ .....	7.0V
Current at Input Pins .....	±2 mA
Analog Inputs ( $V_{IN+}$ , $V_{IN-}$ )†† .....	$V_{SS} - 1.0V$ to $V_{DD} + 1.0V$
All Inputs and Outputs .....	$V_{SS} - 0.3V$ to $V_{DD} + 0.3V$
Difference Input Voltage .....	$ V_{DD} - V_{SS} $
Output Short-Circuit Current .....	Continuous
Current at Output and Supply Pins .....	±30 mA
Storage Temperature .....	-65°C to +150°C
Max. Junction Temperature .....	+150°C
ESD Protection on All Pins (HBM, MM) .....	≥ 4 kV, 200V

† **Notice:** Stresses above those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at those or any other conditions above those indicated in the operational listings of this specification is not implied. Exposure to maximum rating conditions for extended periods may affect device reliability.

†† See [Section 4.1.2 “Input Voltage and Current Limits”](#).

### 1.2 Specifications

**TABLE 1-1: DC ELECTRICAL SPECIFICATIONS**

Electrical Characteristics: Unless otherwise indicated: $T_A = +25^\circ\text{C}$ , $V_{DD} = 5.0V$ , $V_{SS} = \text{GND}$ , $V_{CM} = V_{SS}$ , $V_{OUT} \approx V_{DD}/2$ , $V_L = V_{DD}/2$ and $R_L = 10\text{ k}\Omega$ to $V_L$ (refer to <a href="#">Figure 1-1</a> ).

Thermal Resistance, 14-Lead TSSOP	$\theta_{JA}$	—	100	—	°C/W	

**Note 1:** Operation must not cause  $T_J$  to exceed maximum junction temperature specification (+150°C).

## 1.3 Test Circuit

The circuit used for most DC and AC tests is shown in [Figure 1-1](#). This circuit can independently set  $V_{CM}$  and  $V_{OUT}$ ; see [Equation 1-1](#). Note that  $V_{CM}$  is not the circuit's Common-mode voltage ( $(V_P + V_M)/2$ ) and that  $V_{OST}$  includes  $V_{OS}$ , plus the effects (on the input offset error,  $V_{OST}$ ) of temperature, CMRR, PSRR and  $A_{OL}$ .

### EQUATION 1-1:

$$G_{DM} = R_F/R_G$$

$$V_{CM} = (V_P + V_{DD}/2)/2$$

$$V_{OST} = V_{IN-} - V_{IN+}$$

$$V_{OUT} = (V_{DD}/2) + (V_P - V_M) + V_{OST}(1 + G_{DM})$$

Where:

$G_{DM}$	=	Differential-Mode Gain	(V/V)
$V_{CM}$	=	Op Amp's Common-Mode Input Voltage	(V)
$V_{OST}$	=	Op Amp's Total Input Offset Voltage	(mV)

**FIGURE 1-1:** AC and DC Test Circuit for Most Specifications.

—	—	—	—	—	NC	No Internal Connection

### 3.1 Analog Outputs

The analog output pins ( $V_{OUT}$ ) are low-impedance voltage sources.

### 3.2 Analog Inputs

The noninverting and inverting inputs ( $V_{IN}^+, V_{IN}^-, \dots$ ) are high-impedance CMOS inputs with low bias currents.

### 3.3 Power Supply Pins

The positive power supply ( $V_{DD}$ ) is 1.8V to 6.0V higher than the negative power supply ( $V_{SS}$ ). For normal operation, the other pins are between  $V_{SS}$  and  $V_{DD}$ .

Typically, these parts are used in a single (positive) supply configuration. In this case,  $V_{SS}$  is connected to ground and  $V_{DD}$  is connected to the supply.  $V_{DD}$  will need bypass capacitors.

# MCP6L01/1R/1U/2/4

---

NOTES:

## 4.0 APPLICATION INFORMATION

The MCP6L01/1R/1U/2/4 family of op amps is manufactured using Microchip's state-of-the-art CMOS process. It is designed for low-cost, low-power and general purpose applications. The low supply voltage, low quiescent current and wide bandwidth makes the MCP6L01/1R/1U/2/4 ideal for battery-powered applications. This device has high phase margin, which makes it stable for larger capacitive load applications.

### 4.1 Rail-to-Rail Inputs

#### 4.1.1 PHASE REVERSAL

The MCP6L01/1R/1U/2/4 op amps are designed to prevent phase inversion when the input pins exceed the supply voltages. Figure 2-10 shows an input voltage exceeding both supplies without any phase reversal.

#### 4.1.2 INPUT VOLTAGE AND CURRENT LIMITS

In order to prevent damage and/or improper operation of these amplifiers, the circuit they are in must limit the currents (and voltages) at the input pins (see Section 1.1 "Absolute Maximum Ratings"). Figure 4-1 shows the recommended approach to protecting these inputs. The internal ESD diodes prevent the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) from going too far below ground, and the resistors,  $R_1$  and  $R_2$ , limit the possible current drawn out of the input pins. Diodes,  $D_1$  and  $D_2$ , prevent the input pins ( $V_{IN+}$  and  $V_{IN-}$ ) from going too far above  $V_{DD}$ , and dump any currents onto  $V_{DD}$ .

**FIGURE 4-1:** Protecting the Analog Inputs.

A significant amount of current can flow out of the inputs (through the ESD diodes) when the Common-mode voltage ( $V_{CM}$ ) is below ground ( $V_{SS}$ ); see Figure 2-7. Applications that are high-impedance may need to limit the usable voltage range.

#### 4.1.3 NORMAL OPERATION

The input stage of the MCP6L01/1R/1U/2/4 op amps uses two differential CMOS input stages in parallel. One operates at low Common-mode input voltage ( $V_{CM}$ ), while the other operates at high  $V_{CM}$ . With this topology, and at room temperature, the device operates with  $V_{CM}$  up to 0.3V above  $V_{DD}$  and 0.3V below  $V_{SS}$  (typically at +25°C).

The transition between the two input stages occurs when  $V_{CM} = V_{DD} - 1.1V$ . For the best distortion and gain linearity, with noninverting gains, avoid this region of operation.

### 4.2 Rail-to-Rail Output

The output voltage range of the MCP6L01/1R/1U/2/4 op amps is  $V_{DD} - 35 \text{ mV}$  (minimum) and  $V_{SS} + 35 \text{ mV}$  (maximum) when  $R_L = 10 \text{ k}\Omega$  is connected to  $V_{DD}/2$ , and  $V_{DD} = 5.0V$ . Refer to Figure 2-13 for more information.

### 4.3 Capacitive Loads

Driving large capacitive loads can cause stability problems for voltage feedback op amps. As the load capacitance increases, the feedback loop's phase margin decreases and the closed-loop bandwidth is reduced. This produces gain peaking in the frequency response, with overshoot and ringing in the step response.

When driving large capacitive loads with these op amps (e.g., >100 pF when  $G = +1$ ), a small series resistor at the output ( $R_{ISO}$  in Figure 4-2) improves the feedback loop's stability by making the output load resistive at higher frequencies; the bandwidth will usually be decreased.

**FIGURE 4-2:** Output Resistor,  $R_{ISO}$ , Stabilizes Large Capacitive Loads.

Bench measurements are helpful in choosing  $R_{ISO}$ . Adjust  $R_{ISO}$  so that a small signal step response (see Figure 2-14) has reasonable overshoot (e.g., 4%).

# MCP6L01/1R/1U/2/4

## 4.4 Supply Bypass

With this family of operational amplifiers, the power supply pin ( $V_{DD}$  for single supply) should have a local bypass capacitor (i.e., 0.01  $\mu\text{F}$  to 0.1  $\mu\text{F}$ ), within 2 mm, for good high-frequency performance. It also needs a bulk capacitor (i.e., 1  $\mu\text{F}$  or larger) within 100 mm to provide large, slow currents. This bulk capacitor can be shared with other nearby analog parts.

## 4.5 Unused Op Amps

An unused op amp in a quad package (e.g., MCP6L04) should be configured as shown in Figure 4-3. These circuits prevent the output from toggling and causing crosstalk. Circuit A sets the op amp at its minimum noise gain. The resistor divider produces any desired reference voltage within the output voltage range of the op amp; the op amp buffers that reference voltage. Circuit B uses the minimum number of components and operates as a comparator, but it may draw more current.

FIGURE 4-3: Unused Op Amps.

## 4.6 PCB Surface Leakage

In applications where low input bias current is critical, Printed Circuit Board (PCB) surface leakage effects need to be considered. Surface leakage is caused by humidity, dust or other contamination on the board. Under low humidity conditions, a typical resistance between nearby traces is  $10^{12}\Omega$ . A 5V difference would cause 5 pA of current to flow; this is greater than this family's bias current at +25°C (1 pA, typical).

The easiest way to reduce surface leakage is to use a guard ring around sensitive pins (or traces). The guard ring is biased at the same voltage as the sensitive pin. Figure 4-4 shows an example of this type of layout.

FIGURE 4-4: Example Guard Ring Layout.

1. Inverting Amplifiers (Figure 4-4) and Trans-impedance Gain Amplifiers (convert current to voltage, such as photo detectors).
  - a) Connect the guard ring to the noninverting input pin ( $V_{IN+}$ ); this biases the guard ring to the same reference voltage as the op amp's input (e.g.,  $V_{DD}/2$  or ground).
  - b) Connect the inverting pin ( $V_{IN-}$ ) to the input with a wire that does not touch the PCB surface.
2. Noninverting Gain and Unity Gain Buffer.
  - a) Connect the guard ring to the inverting input pin ( $V_{IN-}$ ); this biases the guard ring to the Common-mode input voltage.
  - b) Connect the noninverting pin ( $V_{IN+}$ ) to the input with a wire that does not touch the PCB surface.

## 4.7 Application Circuit

### 4.7.1 ACTIVE LOW-PASS FILTER

The MCP6L01/1R/1U/2/4 op amp's low input bias current makes it possible for the designer to use larger resistors and smaller capacitors for active low-pass filter applications. However, as the resistance increases, the noise generated also increases. Parasitic capacitances and the large value resistors could also modify the frequency response. These trade-offs need to be considered when selecting circuit elements.

Figure 4-5 shows a second-order Bessel filter with 100 Hz cutoff frequency and a gain of +1 V/V. The component values were selected using Microchip's FilterLab® software; the capacitor values were reduced to a more common range.

FIGURE 4-5: Bessel Filter.

## 5.0 DESIGN AIDS

Microchip provides the basic design aids needed for the MCP6L01/1R/1U/2/4 family of op amps.

### 5.1 SPICE Macro Model

The latest SPICE macro model for the MCP6L01/1R/1U/2/4 op amp is available on the Microchip website at [www.microchip.com](http://www.microchip.com). The model was written and tested in official Orcad™ (Cadence®) owned PSpice®. For other simulators, translation may be required.

The model covers a wide aspect of the op amp's electrical specifications. Not only does the model cover voltage, current and resistance of the op amp, but it also covers the temperature and noise effects on the behavior of the op amp. The model has not been verified outside of the specification range listed in the op amp data sheet. The model behaviors under these conditions cannot be ensured to match the actual op amp performance.

Moreover, the model is intended to be an initial design tool. Bench testing is a very important part of any design and cannot be replaced with simulations. Also, simulation results using this macro model need to be validated by comparing them to the data sheet specifications and characteristic curves.

### 5.2 FilterLab® Software

Microchip's FilterLab® software is an innovative software tool that simplifies analog active filter (using op amps) design. Available at no cost from the Microchip website at [www.microchip.com/filterlab](http://www.microchip.com/filterlab), the FilterLab design tool provides full schematic diagrams of the filter circuit with component values. It also outputs the filter circuit in SPICE format, which can be used with the macro model to simulate actual filter performance.

### 5.3 Microchip Advanced Part Selector (MAPS)

MAPS is a software tool that helps efficiently identify Microchip devices that fit a particular design requirement. Available at no cost from the Microchip website at [www.microchip.com/maps](http://www.microchip.com/maps), the MAPS is an overall selection tool for Microchip's product portfolio that includes Analog, Memory, MCUs and DSCs. Using this tool, a customer can define a filter to sort features for a parametric search of devices and export side-by-side technical comparison reports. Helpful links are also provided for data sheets, purchase and sampling of Microchip parts.

## 5.4 Analog Demonstration and Evaluation Boards

Microchip offers a broad spectrum of Analog Demonstration and Evaluation Boards that are designed to help customers achieve faster time to market. For a complete listing of these boards and their corresponding user's guides and technical information, visit the Microchip website at [www.microchip.com/analogtools](http://www.microchip.com/analogtools).

Some boards that are especially useful are:

- MCP6XXX Amplifier Evaluation Board 1
- MCP6XXX Amplifier Evaluation Board 2
- MCP6XXX Amplifier Evaluation Board 3
- MCP6XXX Amplifier Evaluation Board 4
- Active Filter Demo Board Kit
- 5/6-Pin SOT-23 Evaluation Board, P/N VSUPEV2
- 8-Pin SOIC/MSOP/TSSOP/DIP Evaluation Board, P/N SOIC8EV
- 14-Pin SOIC/TSSOP/DIP Evaluation Board, P/N SOIC14EV

## 5.5 Application Notes

The following Microchip Application Notes are available on the Microchip website at [www.microchip.com/appnotes](http://www.microchip.com/appnotes) and are recommended as supplemental reference resources.

- **ADN003:** "Select the Right Operational Amplifier for your Filtering Circuits", DS21821
- **AN722:** "Operational Amplifier Topologies and DC Specifications", DS00722
- **AN723:** "Operational Amplifier AC Specifications and Applications", DS00723
- **AN884:** "Driving Capacitive Loads With Op Amps", DS00884
- **AN990:** "Analog Sensor Conditioning Circuits – An Overview", DS00990

## APPENDIX A: REVISION HISTORY

### Revision D (March 2020)

The following is the list of modifications:

1. Updated package drawings for the 5-lead SC70 and 14-Lead TSSOP packages in [Section 6.0 “Packaging Information”](#).

### Revision C (October 2019)

The following is the list of modifications:

1. Updated [Section 6.0 “Packaging Information”](#).

### Revision B (September 2011)

The following is the list of modifications:

2. Updated the value for the Current at Output and Supply Pins parameter in the [1.1 “Absolute Maximum Ratings†”](#) section.
3. Added [Section 5.1 “SPICE Macro Model”](#).

### Revision A (March 2009)

- Original Release of this Document.

# MCP6L01/1R/1U/2/4

NOTES:

## PRODUCT IDENTIFICATION SYSTEM

To order or obtain information, e.g., on pricing or delivery, refer to the factory or the listed sales office.

<u>PART NO.</u>	<u>X</u>	<u>/XX</u>	
Device	Temperature Range	Package	
<b>Device:</b>			
MCP6L01T:		Single Op Amp (Tape and Reel) (SC70, SOT-23)	
MCP6L01RT:		Single Op Amp (Tape and Reel) (SOT-23)	
MCP6L01UT:		Single Op Amp (Tape and Reel) (SOT-23)	
MCP6L02T:		Dual Op Amp (Tape and Reel) (SOIC, MSOP)	
MCP6L04T:		Quad Op Amp (Tape and Reel) (SOIC, TSSOP)	
<b>Temperature Range:</b> E = -40°C to +125°C			
<b>Package:</b>			
		LT = Plastic Package (SC70), 5-Lead (MCP6L01 only)	
		OT = Plastic Small Outline Transistor (SOT-23), 5-Lead	
		MS = Plastic MSOP, 8-Lead	
		SN = Plastic SOIC (3.90 mm body), 8-Lead	
		SL = Plastic SOIC (3.90 mm body), 14-Lead	
		ST = Plastic TSSOP (4.4 mm body), 14-Lead	
			<b>Examples:</b>
			a) MCP6L01T-E/LT: Tape and Reel, Extended Temperature, 5-Lead SC70 Package.
			b) MCP6L01T-E/OT: Tape and Reel, Extended Temperature, 5-Lead SOT-23 Package.
			a) MCP6L01RT-E/OT: Tape and Reel, Extended Temperature, 5-Lead SOT-23 Package.
			a) MCP6L01UT-E/OT: Tape and Reel, Extended Temperature, 5-Lead SOT-23 Package.
			a) MCP6L02T-E/MS: Tape and Reel, Extended Temperature, 8-Lead MSOP Package.
			b) MCP6L02T-E/SN: Tape and Reel, Extended Temperature, 8-Lead SOIC Package.
			a) MCP6L04T-E/SL: Tape and Reel, Extended Temperature, 14-Lead SOIC Package.
			b) MCP6L04T-E/ST: Tape and Reel, Extended Temperature, 14-Lead TSSOP Package.

NOTES:

---

**Note the following details of the code protection feature on Microchip devices:**

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as “unbreakable.”

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.
